BARASTOC

horses come first

Barastoc have been feeding top selling yearlings for over 50 years. Our feeds are formulated to maximise muscle growth, body development and weight gain whilst limiting the risk of development orthopaedic disorders.

The aim of our nutrition is to enable the horse to meet its full genetic potential.

Nutrition plays a critical role in assessing and formulating the right balance of nutrients, vitamins and minerals for the health and wellbeing of your yearling.

REDUCED INFLAMMATION IN THE GUT

The inclusion of Diamond V XPC® in Barastoc horse feed helps reduce inflammation in the gut and build immunity in broodmares and young stock. Increased immunity then leads to a greater capacity to absorb nutrients.

BUILDING MUSCLE

Protein is a major contributor to the horses ability to deposit muscle. All proteins are not created equal. Amino Acids, which make up proteins, come primarily in two forms; essential and non-essential. Adequate supply of essential amino acids will enable the horse to maximise its muscle development. Barastoc feeds include elevated levels of essential amino acids to help build muscle rather than deposit fat, and improve visibility of topline.

TRIPLE CALCIUM SOURCE

Barastoc feeds combine three bio-optimized forms of Calcium to maximizes bone building effects;

- Gastrolise™*
- Limestone
- MDCP

These different forms also assist in a more efficient absorption of Calcium from the intestine and navigation to the bone tissue for osteoblastic activity.

*Calcined marine coral extract
